

Nipoppy: A framework for the **organization and decentralized processing** of neuroimaging-clinical studies

Michelle Wang

Neurodatascience–ORIGAMI Lab (Jean-Baptiste Poline)

McGill University

2024 June 25

The truth about many neuroimaging datasets

- They are **messy**
- Data organization/curation and processing is a **time-consuming** and **error-prone** process

How can we organize and process data in a consistent and reproducible manner, to avoid downstream headaches?

Introducing the **Nipoppy** framework

1. **Protocol** for best practices (FAIR principles) in organization/processing of neuroimaging-clinical datasets

Introducing the **Nipoppy** framework

1. **Protocol** for best practices (FAIR principles) in organization/processing of neuroimaging-clinical datasets

Capture

Take data **as they are**

Introducing the **Nipoppy** framework

1. **Protocol** for best practices (FAIR principles) in organization/processing of neuroimaging-clinical datasets

Capture

Organize

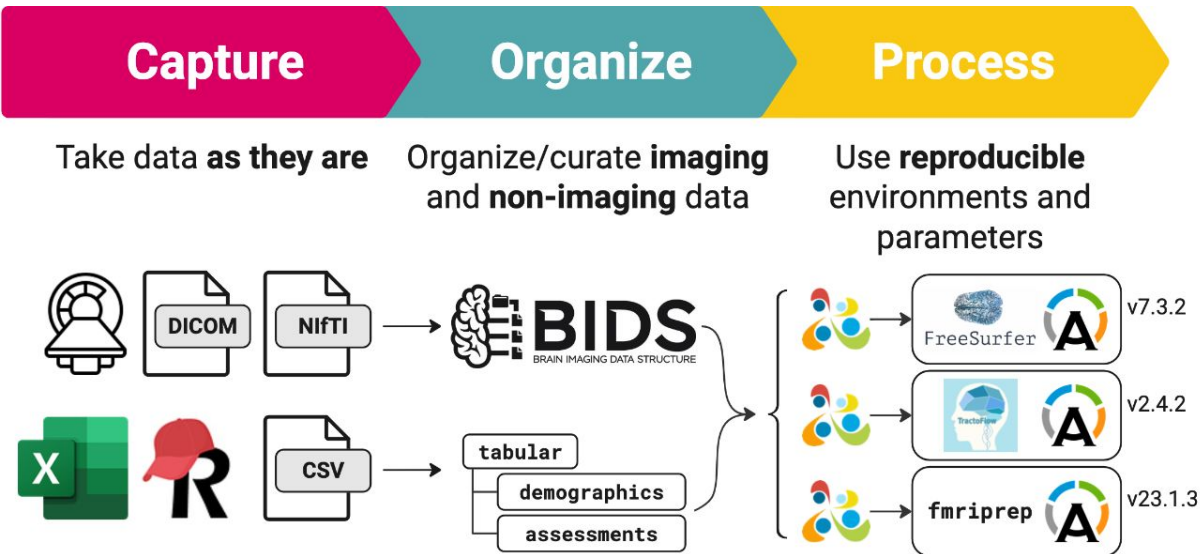

Take data **as they are**

Organize/curate **imaging**
and **non-imaging** data

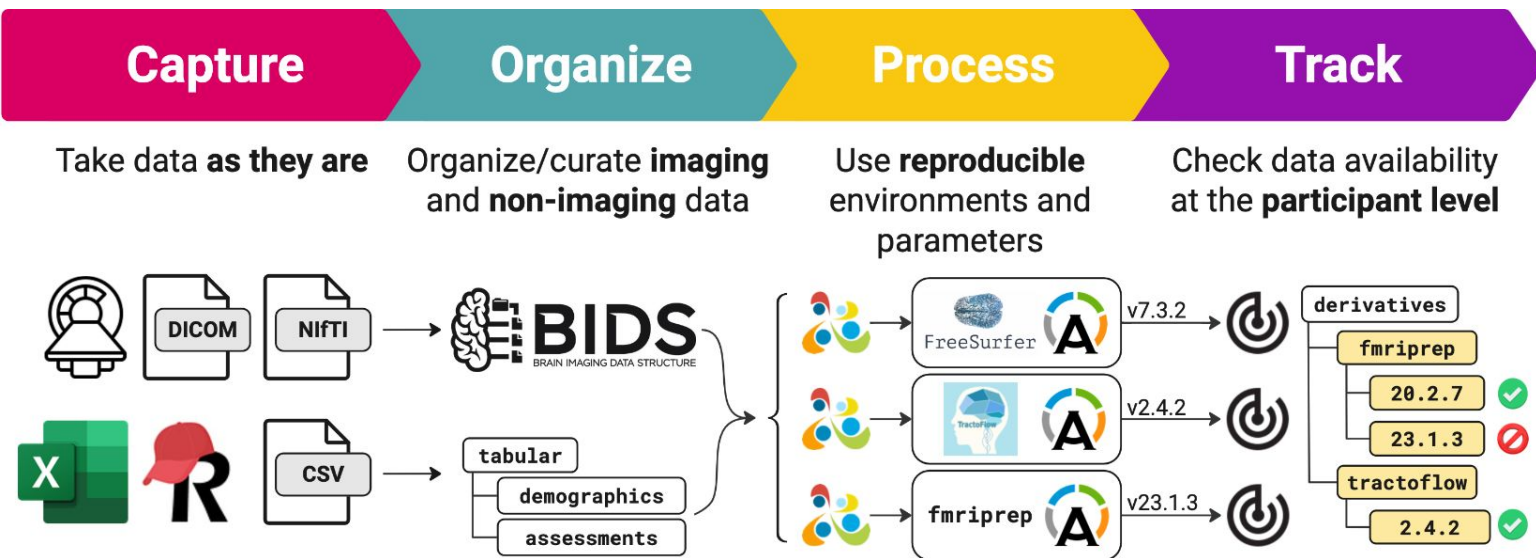

Introducing the **Nipoppy** framework

1. **Protocol** for best practices (FAIR principles) in organization/processing of neuroimaging-clinical datasets

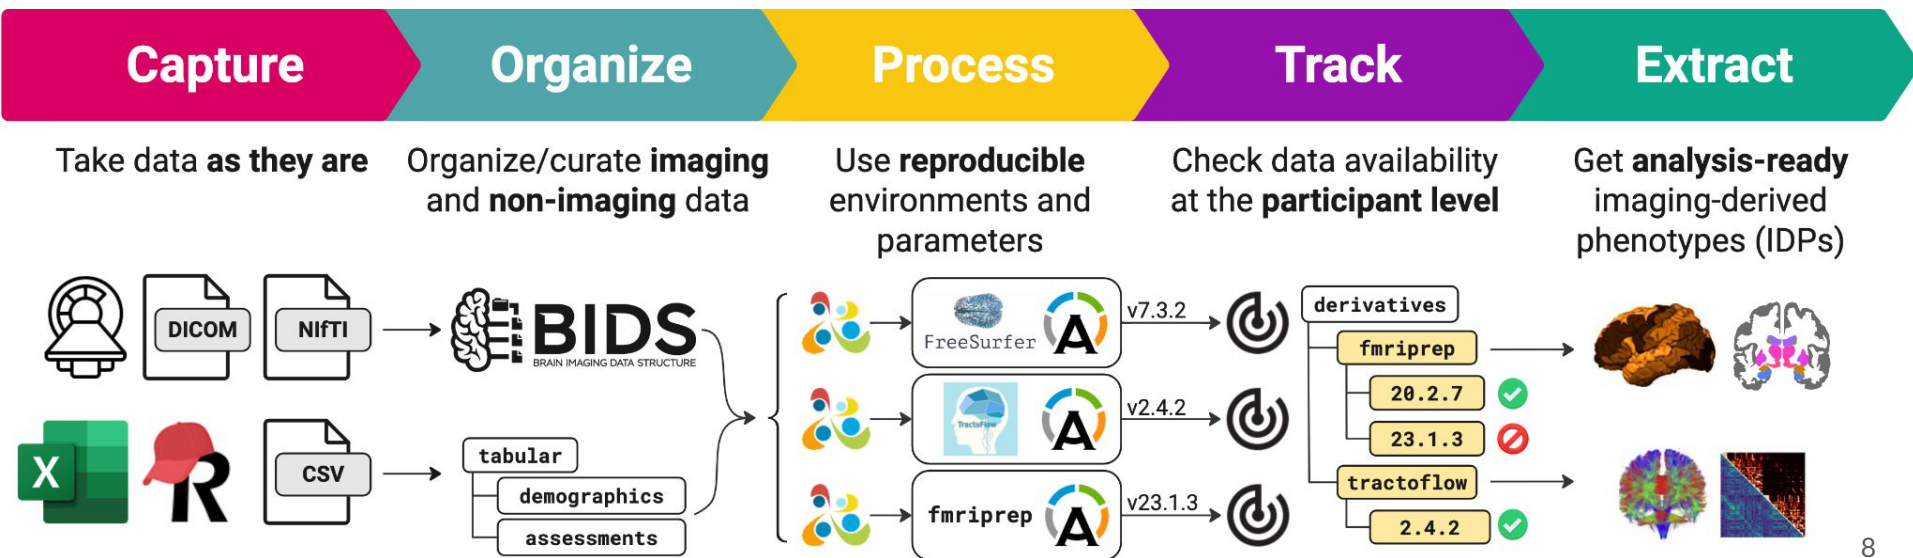

Introducing the **Nipoppy** framework

1. **Protocol** for best practices (FAIR principles) in organization/processing of neuroimaging-clinical datasets

Introducing the **Nipoppy** framework

1. **Protocol** for best practices (FAIR principles) in organization/processing of neuroimaging-clinical datasets

Introducing the **Nipoppy** framework

1. **Protocol** for best practices (FAIR principles) in organization/processing of neuroimaging-clinical datasets
 - a. From raw scanner data to extracted imaging-derived phenotypes (IDPs)
 - b. Visualizing tabular data/metadata on a dashboard

<https://digest.neurobagel.org/>

Capture

Organize

Process

Track

Extract

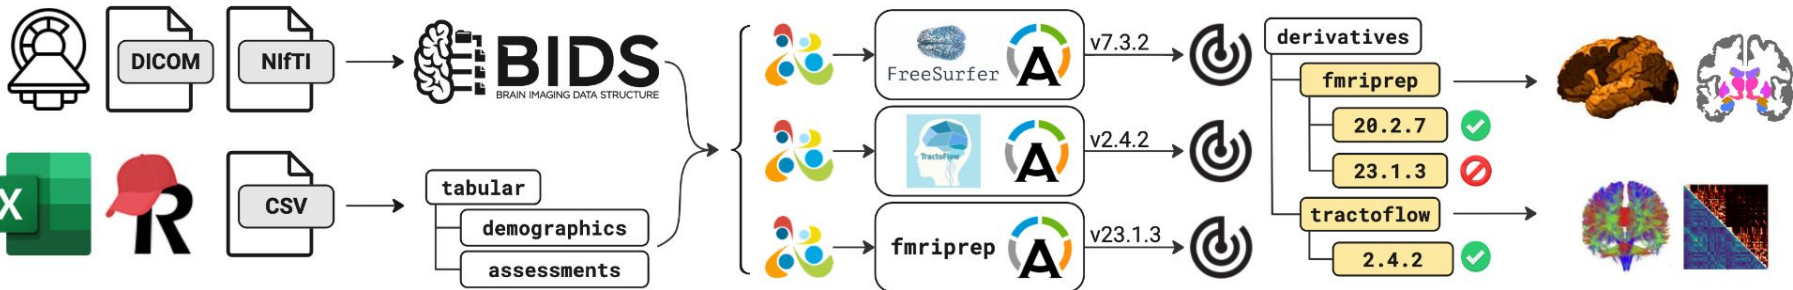

Take data **as they are**

Organize/curate **imaging** and **non-imaging** data

Use **reproducible** environments and parameters

Check data availability at the **participant level**

Get **analysis-ready** imaging-derived phenotypes (IDPs)

Introducing the **Nipoppy** framework

1. **Protocol** for best practices (FAIR principles) in organization/processing of neuroimaging-clinical datasets
 - a. From raw scanner data to extracted imaging-derived phenotypes (IDPs)
 - b. Visualizing tabular data/metadata on a dashboard

Capture

Organize

Process

Track

Extract

2. Data organization **specification**
 - a. For imaging and non-imaging data
 - b. At the whole study level

Introducing the **Nipoppy** framework

1. **Protocol** for best practices (FAIR principles) in organization/processing of neuroimaging-clinical datasets
 - a. From raw scanner data to extracted imaging-derived phenotypes (IDPs)
 - b. Visualizing tabular data/metadata on a dashboard

Capture

Organize

Nipoppy takeaways

Framework combining existing tools

- **Standardized organization** and workflow for both imaging and tabular data
- **Flexible** and **reproducible** processing pipelines
- Pipeline output **tracking** and imaging-derived phenotype (IDP) **extraction**
- Built-in support for **ongoing studies**
- Local, **decentralized** setup → facilitate multisite studies (see also: Neurobagel)
